Q1

Does the Prime Consultant have to perform 50+% of the services for this project?

A1

We prefer the Prime to perform 50+% of the services. On a case by case basis, we will allow less than 50% (i.e., Prime 40%, sub 1 25%, sub 2 25% and sub 3 10%). Since this will be a multi-discipline advertisement (road, bridge, geotech, etc.) that also includes a DBE goal, CCS feels this project meets the requirements for this exception. No one sub-consultant shall have a greater percentage of work than the Prime; however the total percentage of work done by all sub-consultants may be greater than the Prime.

Q2

Can you further explain "a minimum of 45 feet of horizontal clearance"?

A2

The minimum horizontal clearance is 45 feet between bridge fenders, or the minimum boat passage width is 45 feet beneath the bridge. A bridge fender protection system is required on this project due to the close proximity to the port.
